

Technical Surveillance Counter Measures (TSCM)

Is your boardroom secure? Are you planning a merger or acquisition?

Swailles is well versed in detecting eavesdropping threats and has assisted companies worldwide, performing surveys in virtually every corner of our nation as well as internationally. These “sweeps” or “debugging” services, as they are commonly referred to, are designed to detect the presence of clandestine surveillance devices. In the course of a comprehensive counter measures survey, we conduct both an electronic and physical inspection of the area for devices such as:

- Radio Transmitters
- Microphones
- Covert Cameras
- Rogue Wi-Fi AP's
- Laser listening devices
- Telephone line taps
- Carrier current bugs
- Instrument modifications

These inspections include identifying technical security weaknesses or other potentially exploitable hazards. In addition, they help ensure a secure environment for conducting business, for both day-to-day activities and special events such as annual board meetings, mergers, acquisition strategy sessions, or other sensitive and proprietary discussions. Swailles & Company can conduct periodic and routine site surveys, real time monitoring for sensitive meetings, or the handling of an immediate or emergency issue.

Swailles Differentiators

- Experienced Investigators
